Riposte definition music

Flinty is an obvious combination of the noun flint a hard stone, a type of silica and the adjective suffix -y, of Old English -ig, cognizant of German -ig, and associated with Greek -ikos and Latin -icus. One strange element here is that the derivative, metaphorical sense is unrelenting, unnerving, obdurate appearing in the first half of the 16th century, about 75 years before the literal sentence consisting of flint stone (in Shakespeare's Henry VI, Part 1). A second oddity is that the noun flint, which comes from Old English flint, has impeccable cognates with other Germanic languages (Middle Dutch vlint, Old High German flins, Danish flint, Swedish flinta), from a Proto-Indo-European root(s)plow- to split, splice. But flint can be related to the Greek plinthos brick, air-dried brick, square building block, except that a non-Greek language is the usual source of Greek terms associated with building and architecture and nouns with the suffix inthos, such as asáminthos bathing, terebínthos terebinth tree, turpentine tree- Flinty did in the first half of the 16th century English. Since it sees riposte, the free dictionary. In enclosure, a riposte (French for retort) is an offensive action with the intention of hitting one's opponent made by the fencer that just paired an attack. [1] In military use, a riposte is the strategic device for hitting a vulnerable tip of the enemy, thereby forcing him to abandon his own attack. [2] In everyday language, a riposte is synonymous with a retort, describing a quick and witty answer to an argument or an insult. Etymology In sabre and foil switches the priority when the parry is successfully executed; the defensive fence now has right of way and can attack immediately with a riposte. The riposte can be direct, or can include compound footwork. If the riposte is delayed, the original attacker's remise gets priority. Riposte is analogous to kaeshi techniques in kendo. When one sets up a second intention, the reactions of one's opponent must be predicted. A fencer can carry out an attack expected to be parried, preparing to be counter-parry and counter-riposte. Military use André Beaufre defines riposte in military use as the act of striking a vulnerable point of an enemy, forcing him to abandon his own attack. The chosen target should be essential for the enemy or at least highly so that it becomes essential for the enemy to defend it. The overall goal is to reclaim the initiative in battle.
